

Fork Positioner for Forklift

Fork Positioner for Forklifts - A fork positioner is actually a tool made out of high quality materials designed to withstand the most challenging procedures and work environments. This particular piece of equipment can enable the individual driving to be able to maneuver the forks hydraulically without leaving the seat. Side shifting models have the added ability to be able to laterally position the arms or the entire load in order to facilitate much more exact carrying and position in a faster and much more effective manner.

The fork pocket is somewhat unique and enables the person operating it to be able to safely sway the forks into position without any worry of destroying the positioning cylinders. This could allow the driver the alternative to be able to perform independent or simultaneous fork movement, dependent upon the requirements of the job. For most lift trucks with non-OEM carriages, complete carriages are necessary. Standard OEM carriages could be transformed into blade positioners on available units.
